# Free courses in Cyber Security and IoT!

Are your children or students interested in possibly pursuing a university degree in Computer Science or Computer Engineering? Our free courses offer the opportunity to test and see if this area of study is right for them by providing a strong foundation in cyber security and the Internet of Things (IoT).

Skill Level:
No experience in these areas is necessary to take these courses.
No cyber security experience required.

All courses were designed by university professors and specifically structured for 6-12 grade school level and young adults, and include the following:

- Online Instructional Videos
- Case Studies
- Hands-on Experience Building Activities
- Professional Guidance and Mentoring

Teaching students about cyber security, IoT, and technology is more important than ever. In today's world, knowing how technology and cyber security will influence the future is an essential skill to acquire. According to [Ziprecruiter.com], the average salary of an entry level Cyber Security Analyst is $92,000 with room to grow to a six-figure salary at the senior level. These courses will introduce students to the world of cyber security and IoT, its history and impact on the future.
